# ¿Cómo verificar la "public key" en el apt-get de debian?

Si al intentar hacer un *apt-get update* nos muestra el siguiente error:

```
Debian:~# apt-get update
```

```
W: There are no public key available for the following key IDs: B5D0C804ADB11277
```

```
W: You may want to run apt-get update to correct these problems
```

El problema se corrige:

```
Debian:~# gpg --recv-key --keyserver wwwkeys.eu.pgp.net B5D0233ADB11277
```

```
gpg: requesting key ADB11277 from hkp server wwwkeys.eu.pgp.net
```

```
gpg: /root/.gnupg/trustdb.gpg: trustdb created
```

```
gpg: key ADB11277: public key "Etch Stable Release Key <debian-release@lists.debian.org>"  
imported
```

```
gpg: no ultimately trusted keys found
```

```
gpg: Total number processed: 1
```

```
gpg:         imported: 1
```

```
Debian:~# gpg --export B5D0C804ADB11277 | apt-key add -
```

```
OK
```
